

PREVENT

PRocurEments of innoVativE, advaNCed systems to support security in public Transport

Picture source: Transport for Greater Manchester (TfGM)

START DATE: 01.05.2019

RUNTIME: 15 MONTHS

EC FUNDING: 1 894 305,00 EUR

COORDINATED BY: ENGINEERING - INGEGNERIA INFORMATICA SPA

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement number 833444

What is PREVENT about?:

PREVENT focuses on pre-empting attacks in public transport by:

- enabling earlier detection of terrorists activities and potentially dangerous objects;
- tracking of detected individuals or potentially dangerous situations;
- coordinating the response of security forces.

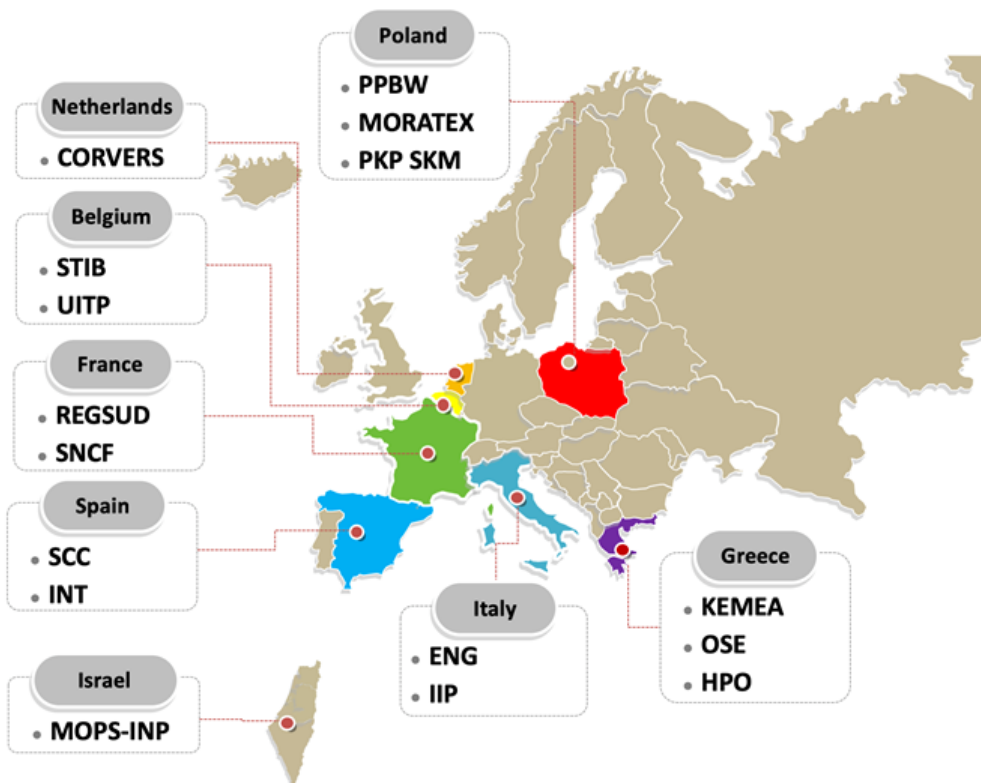

PREVENT aims to:

- **analyse the existing processes and practices in public transport infrastructures** (existing technologies, legal regulation, etc.);
- analyse and **assess the threats and the vulnerabilities**;
- **build the scenarios** through use cases highlighting the gaps between the existing and what would be needed;
- **analyse the technologies** in order to address the process and solutions gaps;
- analyse the data protection, legal and economic aspects of the technologies;
- determine the overall need and prioritise it, to **prepare one Pre-Commercial Procurement**.

The Consortium:

- 16 Partners
- 8 Countries
- 9 Practitioners (public transport operators and law enforcement)
- 5 Public buyers
